## Education

### University of California, Los Angeles (UCLA)

Expected June 2024

*Bachelor of Science in Computer Science*

- Society of Women Engineers (SWE) Web-Dev
- Pakistani Student Association (PSA) - Director of Community Engagement
- **Programming Languages/Tools:** Python, C++, Java, JavaScript, TypeScript, React, HTML5, CSS3, Bootstrap, MongoDB, FireBase, MySQL, AWS, Git, GDB, Valgrind, Docker, Vim, Linux, JUnit, Mockito, Lombok, RISC-V

## Experience

### Amazon Air

June 2023 – September 2023

*Software Development Engineer Intern*

*Seattle, WA*

- Devised Input Parameters for WorkFlow Orchestrator (WFO) forecasting tool allowing scientists to input data into workflows via both input parameters and existing option of input files
- Researched and developed in-depth design document and led team design review for feedback
- Refactored existing **AWS Lambda**-backed APIs, **DynamoDB** tables, and inputs to **StepFunctions**
- Introduced comprehensive input validation to bolster robustness and strengthen security
- Collaborated directly with research clients. Addressed clients' pain points by integrating new forecasting tool
- Oversaw complete feature lifecycle through to production. Conducted thorough **unit/integration testing** to maintain **CI/CD** pipeline health

### SWE at UCLA

December 2021 – June 2023

*Web-Dev Committee*

*Los Angeles, CA*

- Worked alongside 3 SWE developers. Improved responsiveness and streamlined UX via **Bootstrap**
- Designed and implemented UI for internal SWE Glassdoor concept, connecting UCLA SWE members to academic and professional resources
- Mentored incoming members. Maintained thorough documentation and oversaw technical onboarding

### Amazon Air

June 2022 – September 2022

*Software Development Engineer Intern*

*Seattle, WA - Remote*

- Introduced Data Load Job feature to automate and standardize process for scientists to upload various file types onto WFO forecasting models
- Triggered Data Load task by building an **AWS Lambda** job to transport data from external to internal **S3 buckets** via Lambda-backed APIs
- Architected **DynamoDB** table via **CloudFormation** as a mechanism to track Data Load Job status

### Knex Technology

August 2020 – October 2020

*Data Science Intern*

*Irvine, CA*

- Created custom data tables by extracting information from **Oracle's** databases through **SQL** queries
- Leveraged **BI-Publisher** to build analytical reports used by client companies to visualize various company operations

### NASA Community College Aerospace Scholars (NCAS) Program

May 2020 – July 2020

*NASA Aerospace Scholar*

*Stillwater, OK - Remote*

- Developed mock space flight mission to Mars with team of peers and NASA advisor. Won best mission due to depths of research
- Spearheaded team's **Gantt Chart** mission timeline. Coordinated and communicated critical information between sub-teams about engineering operations. Propelled team productivity with proposal of next steps and guiding questions

## Projects

### WalkPpl

February 2022

- Collaborated with 4 peers to create a music-listening web app simulating the experience of using a Walkman
- Enables users to search, listen, and download songs to their device. Supports custom playlist creation and sorting playlists based on 4 preset categories. Leveraged **React** and **Firestore** for **CRUD** operations on song database
